

Retrospective: Sprint 1

Team Members:

1. Sajia Binte Jahangir(SJ)
2. Tanzila Akter(TA)
3. Fariha Rahman(FR)
4. Atia Rahman Orthi (AT)

SJ :

Start Doing:

- Setup the project.
- Implemented Login & searchBook Functionality
- Unit testing for searchBook

Stop Doing:

- Purchase Book functionality[database and other errors]

Continue Doing:

- Documentation generation
- Purchase Book implementation

TA:

Start Doing:

- Create a branch in the GitHub repository, clone the initial project set-up code from the development branch
- Create a model and controller of the wishlist.
- Implementing functionality to add, remove, and update wishlist controller.
- Implementing unit tests for WishlistController.

Stop Doing:

- Ignoring error handling in wishlist operations.

[Error: Incomplete error handling leads to potential issues in user experience.]

Continue Doing:

- Providing seamless user experience in adding and removing wishlist items.

- Continuously improving performance and scalability of the wishlist feature.
- Keeping the codebase organized and well-documented for easy maintenance and future enhancements.

FR :

Start Doing:

- Created a branch in the github repository
- Implemented Ratings and Review book Functionality
- Unit testing for ratings and review functionality

Stop Doing:

- Adding test cases for database connection to ratings and review functionality [database and other errors]

Continue Doing:

- Documentation generation
- Adding test cases for database connection to ratings and review functionality
- Adding eBooks to Cart implementation

AT :

Start Doing:

- Created a branch named “orthi” in the github repository.
- Implemented Update Profile Functionality.
- Unit testing for update profile functionality.

Stop Doing:

- Updating Password shows errors while unit testing.

Continue Doing:

- Documentation generation.
- Solving the password update issue.
- Adding more functionality related to user profile as per client’s requirement.
